

Study 3 — Reorganization is coordination, not deliberation

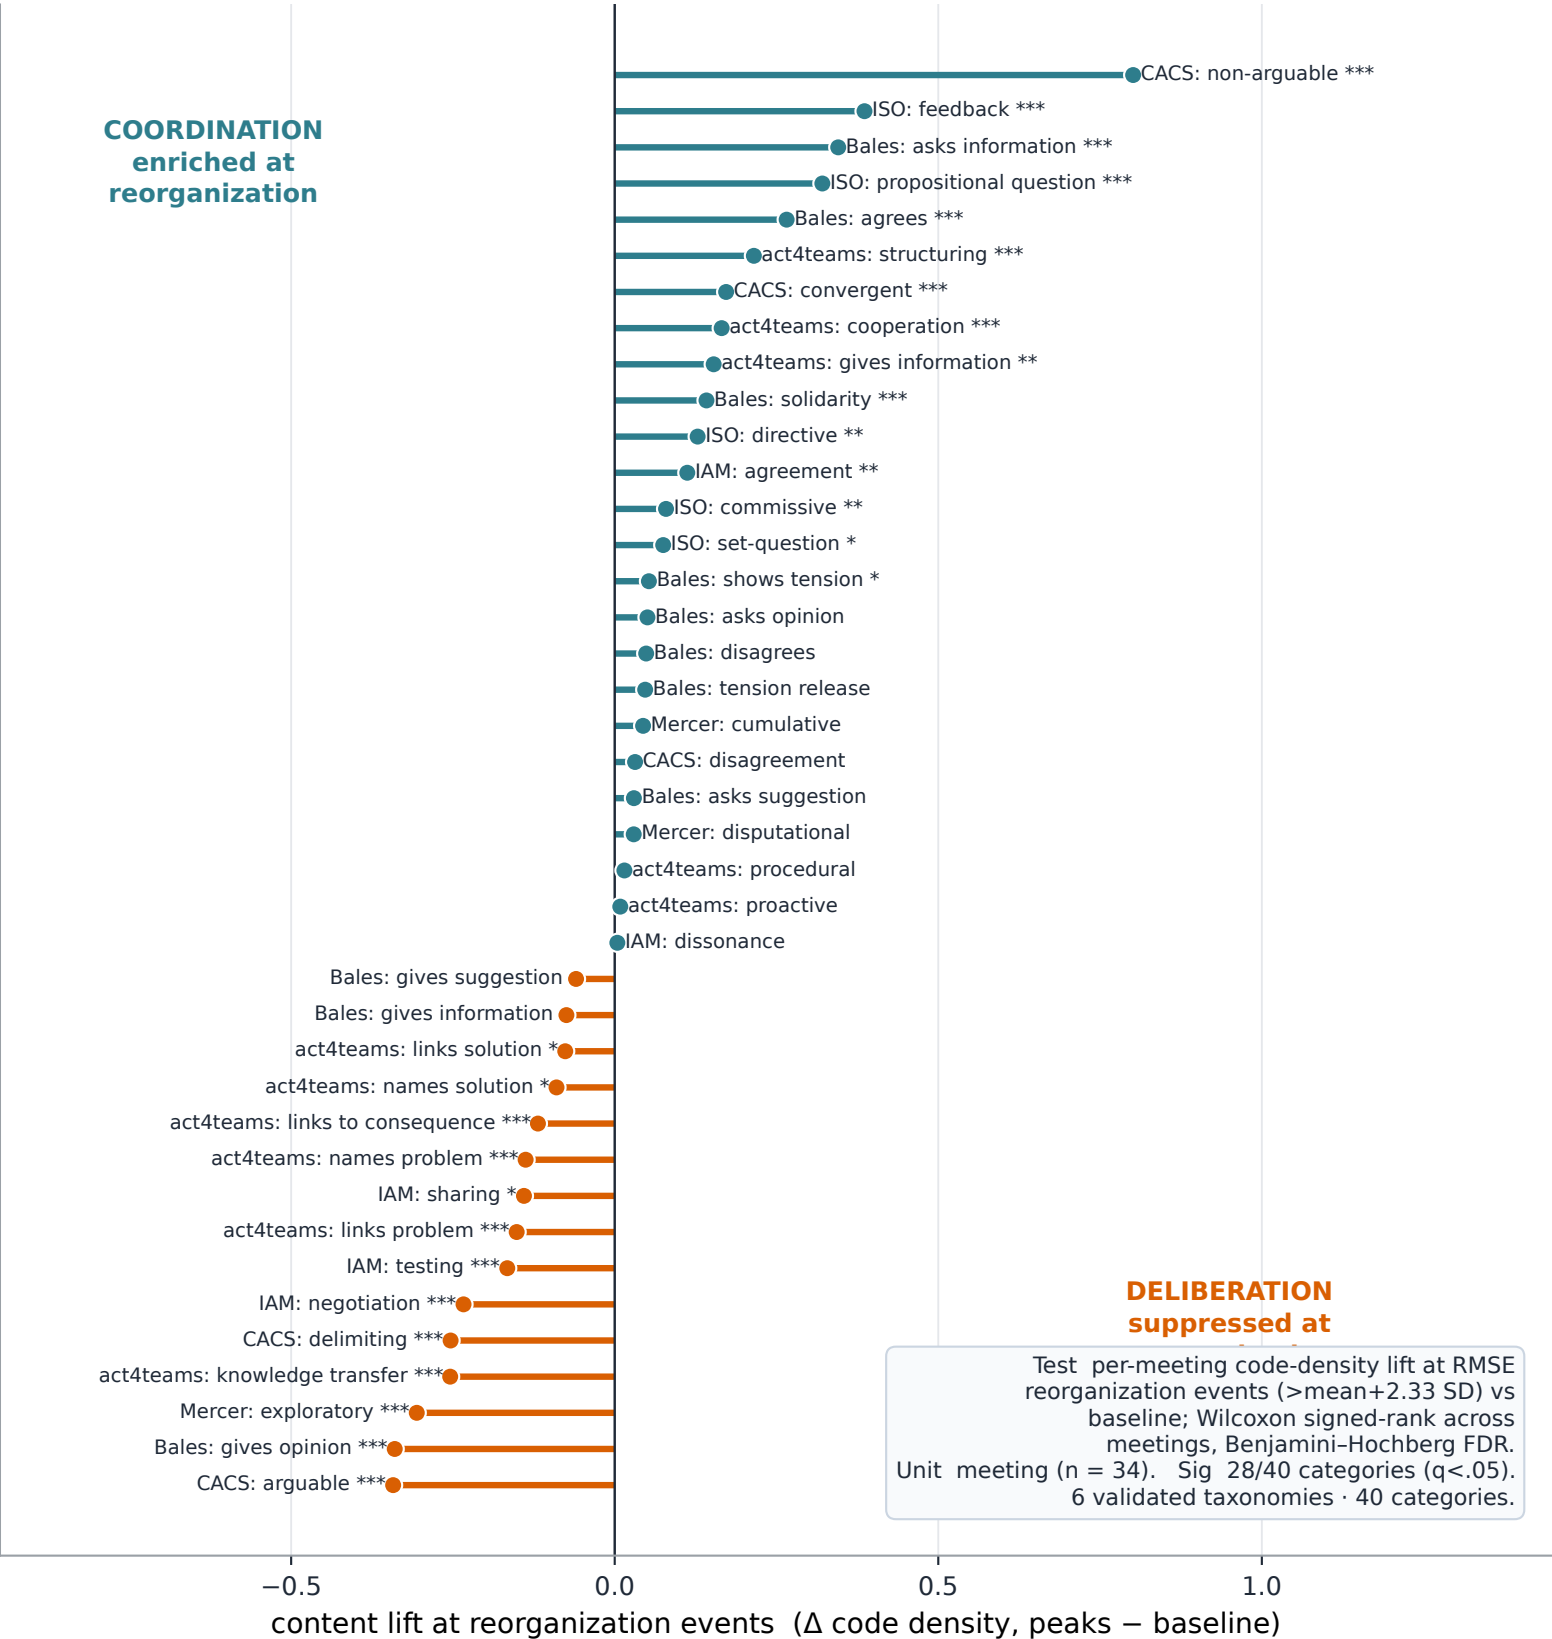

Figure 3. Across all six validated coding schemes, the categories enriched when team communication reorganizes are coordinative/procedural (information-seeking, feedback, agreement, structuring; teal), while argumentation and solution-construction categories are suppressed (orange). Bars = mean within-meeting density lift at reorganization events vs baseline; * $q<.05$, ** $q<.01$, *** $q<.001$ (BH-FDR).
