

Study 6 — Reorganization is a topic-transition phenomenon, legible in the meeting's real agenda

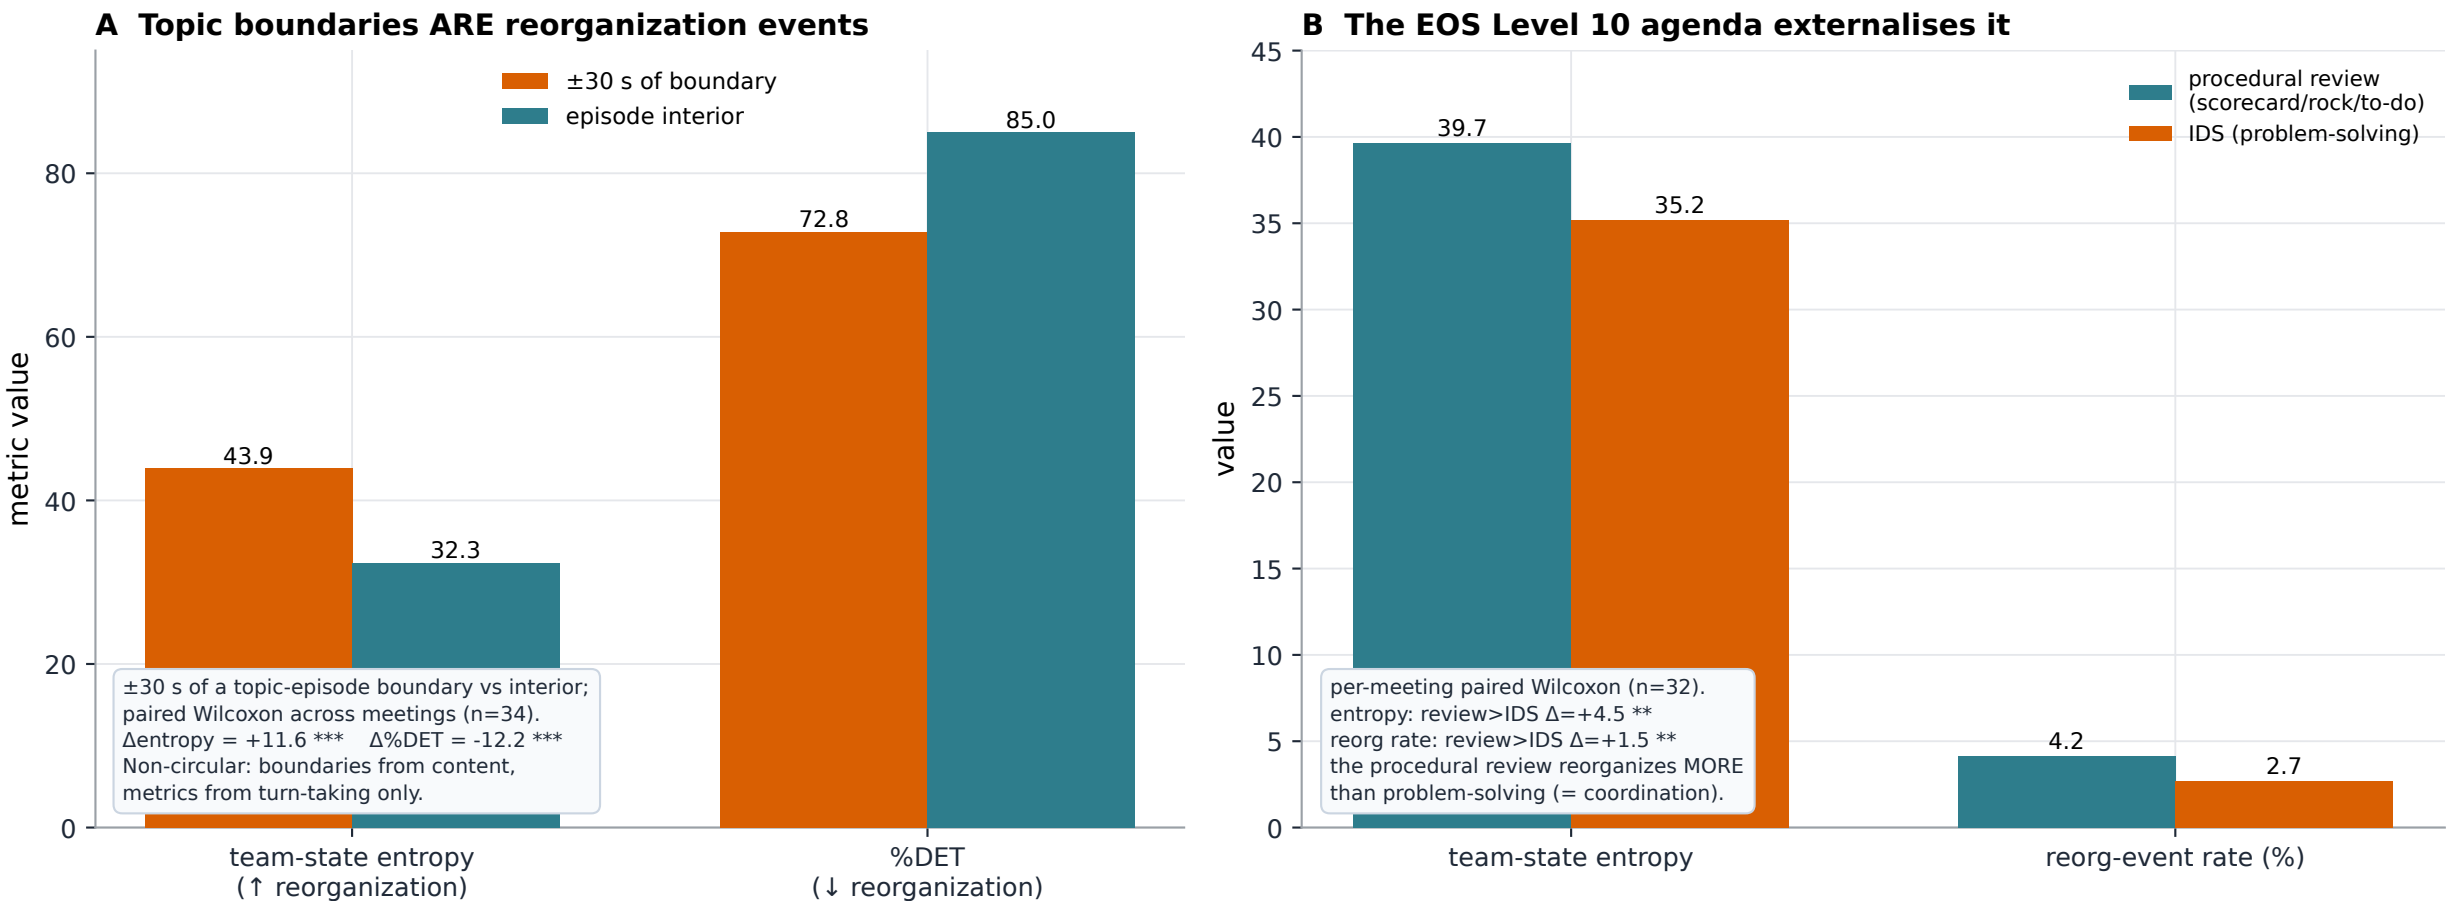

Figure 6. (A) In ± 30 s of a topic-episode boundary, team-state entropy rises and %DET falls vs episode interiors — topic transitions are the naturalistic perturbation that drives reorganization (non-circular: boundaries are lexical, metrics are turn-taking). (B) On the EOS Level 10 agenda these teams run, the procedural review stages reorganize more than the problem-solving (IDS) block — reorganization is coordination, not deliberation. Paired Wilcoxon; * $p < .05$, ** $p < .01$, *** $p < .001$.
